

Expiration Policy

Dear customer:

Based on previous customer requests, YJ sets a standard expiration of 24 months, starting from the date indicated on the product packaging. Based on past data, we retested products that were more than 24 months from the date marked on the packaging to verify that the material could still accept the electrical parameters and functional requirements of the original datasheet. Over the years, we have retested thousands of lots of products and found no degradation in electrical and functional.

For products over 24 months old, the main concern is solder-ability, which is also related to the storage environment. Therefore, YJ recommends that customers conduct solder-ability tests on products over 24 months old.

Also, the storage environment recommendations for all of our products are as follows:

4 Temperature: 10-30 , humidity:
